Dolby Atmos Tools Overview

Spend time on your mix, not your deliverables	Easily and efficiently generate your channel-based music deliverables
Your mix, optimized for any listening environment	Dolby Atmos automatically optimizes content based on the number of speakers in an environment or device, delivering the best experience it can for mobile devices, home theaters, soundbars enabled with Dolby Atmos and even headphones
Stay creative using familiar workflows	Intuitive Dolby Atmos content creation tools integrate easily with your choice of industry-standard workflows, so you can stay focused on the work, not the tools.
↓	
Mix with more control and efficiency	Streamline Dolby Atmos mixing with a unified workflow and interface for configuration, metering, monitoring, and mastering of Dolby Atmos content Create and monitor headphone mixes with advanced binaural render mode metadata
	Create and monitor neadphone mixes with advanced binadral render mode metadata
Integrate easily with your choice of hardware and software	Access Dolby Atmos workflows with native Dolby Atmos Renderer integration in Logic Pro, Nuendo, Cubase, and DaVinci Resolve, and native panning with Pro Tools
Master and archive in high resolution	Master at 96k for a higher-quality 48k output Archive mixes in high resolution to future-proof your content
